

Application- Suspension Hanger Mounts

HandTorque® HT3 1300 N·m + Standard Reaction

Problem: The use of a long lever caused concerns around safety, whereby if the operator lost his footing whilst pulling the force required to tighten the bolts, it is likely an injury would be sustained.

Solution: By using a physically smaller torque wrench in conjunction with a compact torque multiplier, the customer was able to reduce the chance of injury and apply the required torque in a more controlled manner, improving accuracy and reducing operator effort.
